

Nielsen Ratings Measurement and Reporting SOP - MCN TV

Purpose

This document defines how the Research & Insights team manages Nielsen ratings data, the reporting cadence to Programming and Sales & Traffic, and how ratings feed into scheduling and ad-campaign decisions. It complements the Ad Slot Booking SOP, which covers how ratings translate into GRP-based pricing.

Measurement Coverage

Nielsen measures every airing across MCN TV's channels in 10 markets (DMAs), from Jabodetabek and other major regional DMAs up to a combined "Nasional" figure, against 8 standard demographic segments (e.g. Adults 18-49, Women 18-49, Housewives, Kids 5-14). A rating is never reported without a specified DMA and demographic segment - "the rating" in isolation is not a meaningful figure and should not be quoted without both.

Measurement Windows

Two measurement types exist for every airing/DMA/segment combination:

- Overnight: same-day live viewing only, available to Research & Insights the following morning.
- Live+7: adds time-shifted (DVR) viewing captured within 7 days of the original airing, finalized 7 days after air date. Live+7 is always the more complete figure and is the number used for official reporting once available; overnight is used only for same-day operational decisions before Live+7 finalizes.

Reporting Cadence

1. Research & Insights publishes an overnight ratings digest to Programming and Sales & Traffic by 09:00 the morning after each airing.
2. A finalized Live+7 digest replaces the overnight figures 7 days later, distributed to the same recipients plus Finance (for ad revenue reconciliation).
3. A weekly ratings summary (all programs, prior 7 days, both measurement windows) goes to the Programming Committee every Monday, ahead of its weekly scheduling review.

Ratings-Driven Programming Decisions

- A program whose Live+7 national rating falls below its format's minimum threshold (set annually by the Programming Committee, varies by genre) for 4 consecutive weeks is automatically flagged for a scheduling review - daypart change, format revision, or cancellation.
- Prime Time renewal decisions for an existing program's next season require at least 8 weeks of Live+7 ratings history against its target demographic segment, reviewed alongside ad revenue delivered for that program (see the Ad Slot Booking SOP's GRP make-good policy) before the Programming Committee approves a renewal.

Data Quality and Minimum Sample Size

Any rating measured from a Nielsen panel sample below 300 households/people in the relevant DMA/segment is flagged "directional only" in all reporting and must not be used as the sole basis for a scheduling, renewal, or ad-pricing decision - it may only support a decision already justified by other, adequately-sampled data.
